DevOps

Quiz-01 [CLO -01]

Imagine you're part of a superhero team called "Code Avengers." Your mission is to build a powerful web application that helps citizens report crimes and safety issues. The city has been facing challenges, and your feature will empower citizens to submit feedback about safety concerns.

Task:

1. **Branch Creation: The Hero's Launchpad**
   Create a new branch named feature/feedback from the main branch to start your heroic endeavor. Use a command that signifies the start of your mission.

2. **Implement Changes: Crafting the Feedback Power**
   Open the feedback.js file and add the functionality that allows users to submit their feedback. Think of it as equipping your superhero suit with a new gadget.

3. **Stage and Commit: Documenting Your Heroics**
   Stage your changes and commit them with a message that reflects your heroic contribution. Make it memorable—what would you title your act of bravery?

4. **Push Changes: Sending Your Message to the World**
   Push your branch to the remote repository on GitHub, making sure your fellow Code Avengers can see your updates.
